ABOUT

Senior Backend Engineer with **5+ years** building and operating microservices for a large IoT/telecom connectivity platform. Recently owned the architecture of a multi-tenant vendor-aggregation layer - integration design, event contracts, and credential security — unifying multiple operators behind a single API. Strong across reactive (WebFlux, R2DBC, Coroutines) and traditional (MVC, JPA) Spring stacks, Apache Kafka, PostgreSQL/ClickHouse, and Kubernetes. Drive technical decisions and mentor teammates.

SKILLS

— **Languages:** Kotlin, Java (JDK 21)
— **Frameworks:** Spring Boot, Spring Data, Spring Security, Spring MVC, Vaadin
— **Reactive & Async:** Kotlin Coroutines, Spring WebFlux, Project Reactor, R2DBC
— **Data & Messaging:** PostgreSQL, ClickHouse, R2DBC, JPA/Hibernate, Apache Kafka, OpenSearch, Hazelcast, Liquibase
— **DevOps & CI/CD:** Docker, Kubernetes (K8s), Helm, Jenkins, Gradle (Kotlin DSL), Maven
— **Observability:** Micrometer, Actuator, Grafana, Jaeger, Spring Boot Admin
— **Testing:** JUnit, Mockito, Testcontainers
— **Practices:** Microservices, Event-Driven Architecture, Multi-Tenant Systems, REST API Design, Reactive Programming
— **AI-Assisted Engineering:** Claude Code, multi-agent dev workflows, MCP (Model Context Protocol), prompt engineering, LLM-assisted code review

EXPERIENCE

Senior Backend Engineer, *SPD-Technology* 04/2021 – Present | Cherkasy, Ukraine
Project: floLIVE

CMP Aggregator Platform (most recent) - multi-tenant SIM/IoT device-management platform unifying multiple mobile operators behind a single API.

- **Owned key architecture decisions** for the integration layer - connector data model, event contracts, local connector-replica model, and vendor-credential security (AES-256-GCM at rest, decrypted only in-memory within the gateway).
- **Designed and built a reactive vendor gateway** (Kotlin Coroutines, Spring WebFlux, R2DBC) integrating an external vendor API - SIM lifecycle, state transitions, signaling, reporting - and **unified multiple vendors behind a single aggregator contract** despite divergent external APIs and semantics.
- **Built event-driven processing on Apache Kafka** - event-driven CUD with staged routing (source-of-truth → local replicas → view services) and aggregator↔vendor data synchronization, with idempotency and compensating handling.

Core IoT/Telecom Platform (earlier) - connectivity & telecom platform: customer/SIM management, billing, traffic routing, analytics.

- **Built billing, invoicing, and reporting microservices** (Kotlin, Spring Boot), including dynamic PDF invoice generation via JasperReports integration.

- **Delivered features across provider and ordering microservices**, including a Jira-integrated ordering workflow.
- **Set up service observability** - Spring Boot Admin, Micrometer/Actuator metrics, Grafana dashboards, and Jaeger distributed tracing.
- **Owned CI/CD and deployment** - authored Helm charts for Kubernetes and configured Jenkins pipelines (Docker, Gradle).
- **Standardized delivery across all microservices** - built a custom Gradle plugin (service versioning + deployment setup) and shared internal libraries with a centralized dependency catalog, adopted team-wide; led technical demos for client-side teams.

Stack: *Kotlin · JDK 21 · Coroutines · Spring Boot (WebFlux/R2DBC, MVC/JPA) · PostgreSQL · ClickHouse · OpenSearch · Apache Kafka · Hazelcast · Liquibase · JasperReports · Gradle (Kotlin DSL) · Kubernetes · Helm · Docker · Jenkins · Grafana · Micrometer · JUnit · Mockito · Testcontainers*

EDUCATION

Kyiv National University of Technologies and Design (KNUTD), 2003 – 2007
Specialist Degree, Computer Systems Programming

SPD-University, *Certified Java Developer* 2020 – 2021

CERTIFICATES

Claude Code in Action (Anthropic)

Generative AI: Prompt Engineering Basics (IBM)

Certified Vaadin 24 Developer (Vaadin)

Jenkins: Essentials (CloudBees)

Liquibase Fundamentals (Liquibase)
